

Data covariance

Width along $u_i \propto \sqrt{\lambda_i}$

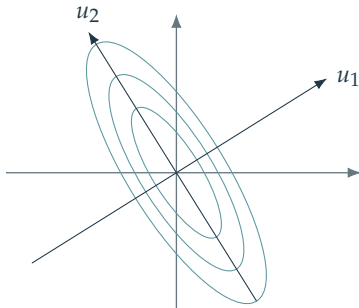

$$C/n = U \operatorname{diag}(\lambda_i) U^T$$

Semiaxes: $r\sqrt{\lambda_i}$ (left), $r\sqrt{\lambda_1\lambda_2}/\sqrt{\lambda_i}$ (right), $r = 1, \frac{3}{2}, 2$.

Quadratic level sets

Width along $u_i \propto 1/\sqrt{\lambda_i}$

$$\langle Cx, x \rangle / n = \text{constant}$$
