

## Shannon condition holds

$$f(t) = \text{sinc}^4(t/4)$$

Original signal

Sampling

Interpolation kernel

Reconstruction

$\tilde{f} = f$ : exact reconstruction

$$\text{sinc}(t) = \frac{\sin(\pi t)}{\pi t}, \quad \tilde{f}(t) = \sum_{n \in \mathbb{Z}} f(n) \text{sinc}(t - n)$$

## Shannon condition is violated

$$f(t) = \text{sinc}^4(t/2)$$

Original signal

Sampling

Interpolation kernel

Reconstruction

$\tilde{f} \neq f$ , although  $\tilde{f}(n) = f(n)$

Pale band:  $[-\pi, \pi]$ . Dashed spectral curves: replicas. Red shading: aliased mass.  
Dashed red in the reconstruction row: the original signal and spectrum. Dots: the shared samples.
