

Radial extension from an interior point

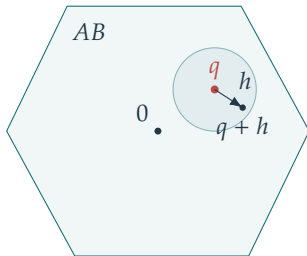

$$Au = (1+t)q, u \in B$$

$$z = ru/(1+t) \text{ gives}$$

$$Az = Ax_0 \text{ and } \|z\|_1 < r.$$

$$r = \|x_0\|_1 > 0, \quad q = Ax_0/r, \quad A \text{ onto}$$

A better feasible vector gives an interior point

$$Az = Ax_0, \|z\|_1 < r$$

$$q + h = A(z/r + A^+h) \in AB$$

for small h .
